

Workable-items SQLite-SSoT — Status

Revision: 1 Last modified: 2026-05-28T15:30:00Z

Scope

Project-local Go binary at cmd/workable-items/ implementing the §11.4.93 SQLite-SSoT for workable items in the tmux project. The constitution submodule (constitution/scripts/workable-items/) ships a Phase-2 scaffold (stubs + canonical schema.sql); per the feedback_no_modify_constitution memory rule this project cannot push Phase-3+ code into the submodule and instead carries a drift-checked local implementation. Upstream PR to HelixDevelopment/ HelixConstitution is tracked as a follow-up cycle.

Current state — PWU-C cycle (2026-05-28)

Item	Status	Evidence
go.mod + go.sum (modernc.org/sqlite, pure-Go, no CGO)	PASS	go build ./cmd/workable-items succeeds on darwin/arm64
Embedded schema.sql (drift-checked vs constitution 6828ff2)	PASS	cmd/workable-items/schema.sql header line 1
OpenDB + WAL mode + PRAGMA wal_checkpoint(TRUNCATE) on Close	PASS	TestOpenDB_AppliesSchema
Subcommand router (sync md-to-db, sync db-to-md, diff, validate, add, close, report)	PASS	workable-items --help lists every subcommand
Markdown parser — recognises ### <CAT><N>. <title> - `` headings	PASS	TestRoundTrip_Issues_GoldenCorpus
Status: / **Type:** / **Severity:** / **ATM-ID:** body-field extraction	PASS	TestRoundTrip_Idempotent (second sync allocates 0 new ATM-NNN)
Generator — re-emits ### <CAT><N>. <title> - `` byte-stable for golden corpus	PASS	TestRoundTrip_Issues_GoldenCorpus, TestRoundTrip_Fixed_GoldenCorpus
	PASS	TestRoundTrip_Idempotent

Item	Status	Evidence
Idempotent re-sync (second md-to-db allocates 0 new IDs)		
§11.4.91 description clarity floor enforced	PASS	TestValidate_DetectsShortDescription
§11.4.33 type-aware closure vocabulary enforced	PASS	TestValidate_DetectsTypeAwareClosureMismatch
§11.4.5 + §11.4.69 evidence-required for close	PASS	TestCloseItem_RequiresEvidence
Initial real-corpus population	PASS	docs/workable_items.db (45 items: 1 from Issues.md, 44 from Fixed.md)
-count=3 deterministic re-run	PASS	go test ./cmd/workable-items/... -count=3

Known §11.4.6 honest gaps

- **45 legacy items default to Type=Task** because the tmux corpus predates §11.4.16 — no ****Type:**** lines exist in Issues.md / Fixed.md. Result: `workable-items validate` reports §11.4.33 violations for every closed item that used the RESOLVED heading hint (mapped to Fixed (→ Fixed.md), the Bug closure word) while the row's type is Task (which would expect Completed (→ Fixed.md)). This is expected initial state, not a bug in the binary. Closure migration per §11.4.33 is a separate one-time data-cleanup PWU.
- **Live corpus round-trip is NOT byte-identical.** The tmux Issues.md / Fixed.md carries free-form bodies (forensic anchors, multi-paragraph "Source-side fix" + "Captured evidence" sections, blockquotes, code fences) that cannot be losslessly reconstructed from the structured `items` schema's flat description field. Round-trip byte-identical equivalence is met for the GOLDEN TESTDATA corpus only; live-corpus drift is expected and authorised by the §11.4.93 phase-6 migration plan.
- **`commit_all.sh` / `verify.sh` / `sync_issues_docs.sh` integration is deferred** to PWU-E (main context owns scripts/* edits).

Composition

§11.4.93 (SQLite-SSoT mandate) · §11.4.95 (DB tracked in git) · §11.4.54 (ATM-NNN identifier) · §11.4.33 (type-aware closure) · §11.4.91 (clarity floor) · §11.4.50 (-count=3 deterministic re-run) · §11.4.69 (`ab_pass_with_evidence` semantics applied to `close` evidence-path) · §11.4.74 (project-local extension because no-modify-constitution memory rule blocks upstream PR this cycle).
